

**SSCI's Priority:
Getting the job done, not
prolonging our
participation:**

**Fuel Systems Design,
Install, Repair, Removal,
Remediation**

**Risk-Based Corrective,
Action, Remediation and
Closure**

Waste Management

**Engineering and
Consulting Services**

**Professional and
Technical Training**

**Environmental Site
Assessments**

**Wetland and Ecological
Consultations**

HOT off the press:

Under the rules found in Title 30 Texas Administrative Code Chapter 334, owners of regulated petroleum storage tanks must notify the TCEQ of any construction activity at underground and aboveground petroleum storage tank sites. **Submit the new 30-day NOC (Notice of Construction) form 30 days before the work begins.**

ENGINEERED FUELING SYSTEMS:

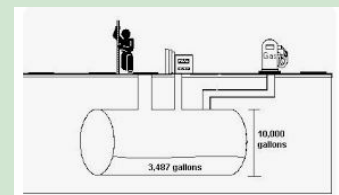

SSCI provides detailed planning, design, engineering, installation, and project management services to our Clients responsible for the storage and delivery of Bulk Fuel Systems in their operations. In addition to keeping updated on the State and Federal regulations for fuel systems, SSCI is a licensed trainer for TCEQ and other states' Fuel Contractor Licensing programs.

Our teams work closely with Clients to develop a comprehensive project scope for a clear and concise understanding of project needs and constraints. Clients are provided with a single point of contact for managing complex installations, including permitting, engineering design, project management, construction, and value-added services. Our single point of contact approach reduces our clients' coordination costs, as well, as overall project costs.

SSCI also provides "critical need" fueling operation consulting and engineering services, including evaluation and value-added services to ensure fueling systems remain up and running during times of emergency conditions, facility accidents, and natural disasters. These services include third-party fuel system evaluations for certification and other insurance needs.

Engineering Services offered:

- Engineering and Design
- Installation and Upgrades
- Removals and Remediation
- Hazardous Waste Removal
- Hazardous Waste Transport
- EPA SPCC and FRP Plans
- Training and Inspections
- Leak Detection Systems

- Secondary Containment Systems
- Fire Protection Systems
- Fuel Monitoring and Management Systems
- Tank Cleaning
- Construction-Phase Services
